

GEN-X

Robotic Sweeper/Scrubber

> *Operator Guide*

GEN-X Floor Care Robots boost productivity by freeing the operator from the floor machine, allowing them to complete other tasks while floors are being scrubbed or vacuumed. On average an operator spends only 30 minutes per shift with the robot, and all aspects of the user interface have been designed for ease of use.

1. The operator fills the GEN-X Sweeper Scrubber with water and cleaning solution.

4. After cleaning, the operator extends a hose and opens a valve to drain the tank.

2. The operator selects the desired route on the touch screen and the robot begins.

5. The operator unscrews the cartridge filters to replace the cotton elements.

3. If additional run time is required, the operator can exchange the battery pack.

6. The robot is returned to storage and the charger is connected to the battery plug.
